

ProP Group 34 Meeting #1

Time: 3:35 PM - 4:10 PM

Location: Fontys

Attendees: Talia, Dholon, Thanh, Chanelle, Postma, Gerald

Client: Postma

Client: "What kind of event do you have in mind?"

We have a LARP event in mind; Live Action Role Play.

It's an event where people dress up and role play. People would usually stay extra days, 2 to 3. They would camp there, rent tents or bring their own. They can rent the costumes themselves or bring their own attire. If we have a medieval role play, we would simulate a real battle. They may rent foam weapons for the battle. This can span through more themes like Sci-Fi.

"I would be happy to hear how you're going to support those events. There are a couple of things I'd like to have: terrain itself. People can stay there for the camping. Use it for the event. We have this event as well."

Company's contact information:

Event International (company name)

Has a part-time job at Fontys, so use that email. It's best to contact via Fontys email.

Workbook:

Identification type for the event account. The QR-code, barcode. We have our own idea: Instead of using the QR code, we might use the cards with a magnetic band, where we can upload information to the card. The customer use the card, and they can use it for purchases, check information, they can return the card and it can be reused for another event.

"Do you have those cards?" - You can borrow supplies from Fontys.

We will need to show an example of the card. Thus, we need to provide it.

We can borrow supplies from ISSD for the duration of the project. If they don't have the card, we can choose one of the three that are proposed in the student workbook. If we have a card that can be used at the festival, that is cheap, then we can use it at the festival.

"Would be perfect, but we need to see it work"

Are there any specific constraints in regards with the development tools?

"That is your profession. That is for you to know. I'm only taking care of the events. If it's about software, you're the professionals"

Do the application need to work on all mobile devices?

"Yes, that would be nice. Some people have tablets and it would be nice for it to work there."

For the website?

"For the website it would be nice to have. The website is for reservations and purchasing tickets before actually going to the event."

Many people use their phones to purchase things, so it would be best to do it via the application.

"So you would provide an android application?"

We'll provide a responsive website. A website that works both on the laptop and mobile device.

"Are you thinking on using the phone for paying? You say for ordering on the phone"
No, only for ordering the ticket.

"I can use my mobile phone or laptop to buy the ticket"

Proof of concept and product is required?

"Somewhere halfway through the project, 7 to 8 weeks, we should finish a prototype for the website. We would be working on documentation. As soon as you have some prototype, I'll be interested in it."

"It should be presented as a presentation."

Is it possible to know who are the shareholders and sponsors?

To put the names on the website.

"I'm not sure which sponsors to contact. I'll let you know"

"The budget is based on the solution."

There isn't a budget?

"What would be your proposal? 4 persons."

We can come back to this in the next week.

When is the final deadline?

"I would like to have events in the summer. So at the end of the school year. Somewhere in June. I would like the final application to be ready at that time, week 19."

"Sometimes I have my own persons, and sometimes I have to hire some employees. Not all the employees are speaking English, especially in the shops. This event I was imagining we have shops that sell drinks and food. So especially there, I would like you to apply some international language. Bit like when you go to Mcdonalds. You can order the products from an app instead of ordering at the desk. This can be used by the customer and also by the employees."

Preferably to have an international language.

"We have a website where we have the camping. I would like to make a reservation there. One can make a reservation for a whole group. It would be nice to have, that you can indicate on the map, where you would like to rent a tent or where you would like to stay. Possible to show a different color for where the spots are taken already. Just like buying a ticket at the cinema. If you have to use language, you can stick to English."

"If you can provide the website in 2 languages, you can think about that."

Who are the main visitors? Are they from different countries?
Would be great to have the website in both Dutch and English.

Regarding the loan stands, should it work like the shop stands?

"More or less, it's similar but not the same. If you're buying coca cola, you don't really care about it. When it comes to the loaning of a costume, the renter would like to know who has it in order to get it back. The renter can have the option to charge if there are any damages. Each item should have a unique identifier. Before you go home, you return the item, or else you will be charged.

You can put money on the card instead of using funds. You can use application to put money on it, to balance for the specific idea. In an efficient way, you enter that ID. There are particular points where you can put more money on the card at the event.

For renting the costume, you pay the rent and a safety fee (5 euros a day, 50 euros safety deposit for example). The customer will get the money back (50) when they return the costume. Deductions will be made if there are damages to the costume.

They will let us know who will sponsor our website.

Ask client next time:
Bundles

Mentor: Gerald

Are we supposed to make up information like phone numbers?

"Sure, I didn't get any information yet, but send me the stuff"

We have everything uploaded to GIT. The client is not interested in GIT. The mentor is.

"I can be part of it. I will only read. If the minutes are there, I can get it from there. If you are having technical issues, I may be able to give you some guidelines"

What is the static part of the website?

"It's unchangeable. This is a question for a next time."

The reflection are individually?

"Is it necessary weekly?"

It's part of the process report. It's up to us how we want to write it.

“The planning and process should be done every week. Technical issues should be discussed. Reflection is part of the final report. We can do it bi-weekly”

How much freedom do we have for the event?

“You have a lot of freedom, but if you’re not sure, that’s your question to the client.”

“The idea of this project is to apply the fact that you learned. If you learned things, use it. If you want to go further...”

If the application uses similar things to what we learn in WEB1 and WEB2, then we can use the application.

This time we have to make a design document for everything, so we don’t have to make?

“The real implementation is in the second block”

We’re only delivering documentations for the first block. The second block is the actual development.

Every week have a meeting during ProP? Yes.

“My time slot is from 3PM to 4PM. If you want to change to Monday or Wednesday, just let us know”

It doesn’t have to include the client. We don’t have to invite the client until we really need him.
