ProP Group 34 Meeting #5
Date: 24th April, 2018
Time: 15:15 to 16:00 (3:15 – 4:00 PM)
Location: Fontys R1 2nd Floor Common Area
Attendees: Project Team, Mentor and Client
Chair: Thanh and Chanelle
Minute taker: Talia

Thanh went over the setup document and Chanelle over the project plan briefly. Client will go over the documents presented and review them in his own time, providing his comments and thoughts on them at a later date.

A small demo was given of both the static website and the applications designed.

Website:
- Two versions were showcased
- One was considered an older style of website, while the second was considered more of a modern style. Comments were made regarding the fact that it would take more scrolling on the modern version and less information could be shown to fit this style, no final preference was given.
- Some questions regarding design choices and content explanations were given.
- "Setting" was not an attractive word for its purpose, it was suggested that we find a different word that would suit it better. One suggestion: Campaign instead of Setting, with "The Story So Far" at the top of the page, or something of this nature.

Applications:
- Questions regarding design choices and future functionality, as well as detailed explanations, were given.
- It was requested that the applications have a more visual interface, more pictures (example: application for shop have pictures of the items rather than just their names).
- The various windows that are opened upon clicking the various buttons and the fact that they are all fixed position was regarded as messy and confusing, as well as there being too many clicks.
- It was requested that the applications do not allow the users to access Windows, therefore they should be full screen, hide the bar at the top, and run on start up. One suggestion: substitute the little windows for one main window that changes back and forth. Maybe use a hover on event to handle possible button confusion (i.e. someone not knowing what a certain buttons does).
- Have authentication on the applications.
